Full Stack Web Developer (React | Node.js | Mongo DB | JavaScript)

PROFESSIONAL PROFILE

Full Stack Web Developer trained in JavaScript, Node.js, Express.js and MongoDB. Skilled in building interactive and optimized web applications focused on user experience and backend efficiency. Combines solid administrative experience in the public sector with a strong orientation toward data analysis, process automation and workflow optimization. Passionate about building scalable and accessible digital solutions.

PROFESSIONAL EXPERIENCE

ISSSTE, Mexico City, Mexico

March 2020 – Present

Process and Data Analyst

Responsibilities:

- Coordinate workflow between departments for requisition and delivery of office and food supplies, IT and construction materials, optimizing operational response times.
- Manage physical and digital warehouse documentation, improving organization, classification, and traceability of information.
- Analyze purchasing and consumption patterns to optimize inventory control, reduce waste and improve resource allocation.
- Support inventory digitization and data maintenance to ensure data accuracy and availability.

Achievements:

- Improved requisition and delivery efficiency by optimizing interdepartmental workflows and reducing operational errors.
- Strengthened inventory management through data analysis, supporting better stock control and decision-making.
- Optimized warehouse archive organization, improving information accessibility and resource traceability.
- Contributed to the transition toward structured and digital records, increasing administrative efficiency.

PROJECTS

Cookify – Recipe Search Platform

October 2025 – November 2025

Responsibilities:

- Integrate an external recipe API with a custom backend, ensuring stable and efficient user-server data flow.
- Implement user authentication and authorization, enabling secure registration, login and personalized profiles.
- Build a RESTful API to manage users, favorite recipes and persistent data using CRUD operations and backend validation.
- Design a responsive, user-focused interface using reusable React components and frontend best practices.

Tools & Technologies:

- JavaScript, HTML, CSS, React.js, Express.js, Node.js, MongoDB, RESTful APIs, Winston, Celebrate-Joi, Git, GitHub.

Personal Portfolio

March 2026

Responsibilities:

- Design and develop a personal portfolio SPA using React + Vite, deployed at novelisk.dev
- Implement client-side routing, a contact form via EmailJS, and a fully responsive layout with pure CSS.
- Structure the project following scalable frontend architecture best practices.

Tools & Technologies:

- JavaScript, HTML, CSS, React.js, EmailJS, Git, GitHub.

REC-ON Studio – Professional Recording Studio Website

June 2026

Responsibilities:

- Design and develop a fully responsive multi-page website for a professional music recording studio, deployed at reconstudio.com.mx
- Build an interactive **Services Modal** with hover-based tabs that dynamically update a full-background image and services description across 6 studio services.
- Deploy a custom **Album Carousel** from scratch (no library) featuring auto-scroll every 3 seconds, pause on hover, infinite loop, and prev/next navigation – with per-album social links popup.
- Implement a **Booking Page** for studio session reservations and a Contact form via EmailJS with no backend required.
- Structure a multi-page client-side routing including Home, About, Services, Booking, Privacy Policy and Terms pages, plus a custom 404 not found page.
- Optimize all media delivery using ImageKit CDN.

Tools & Technologies:

- JavaScript, HTML, CSS, React.js, EmailJS, ImageKit CDN, Git, GitHub.

Paola García – Actress & Dubbing Director Portfolio

June 2026

Responsibilities:

- Design and develop a fully responsive single-page application (SPA) for a professional actress and dubbing director, built from a custom Figma design.
- Implement a custom *useScroll* hook to drive a transparent-to-solid header transition, and a responsive hamburger menu with smooth scroll anchor navigation.
- Build an interactive photo gallery with a **lightbox modal** using *yet-another-react-lightbox*, and a **filterable Projects section** by category (Acting | Dubbing).
- Deliver fluid typography throughout using CSS clamp() and a fully responsive layout (mobile, tablet, desktop) with pure CSS and BEM methodology.
- Integrate **EmailJS** for a functional contact form with no backend, and **ImageKit CDN** for optimized image delivery.

Tools & Technologies:

- JavaScript, HTML, CSS, React.js, React Icons, EmailJS, ImageKit CDN, Git & GitHub.

EDUCATION

Full Stack Web Developer

TripleTen

December 2024 - November 2025

COURSES

- Functional Programming in JavaScript – Udemy.

- Git + GitHub: Version Control – Udemy.

LANGUAGES

Spanish – Native

English – Intermediate (B1)
